locations served

Onboard active  
agent network  
worldwide

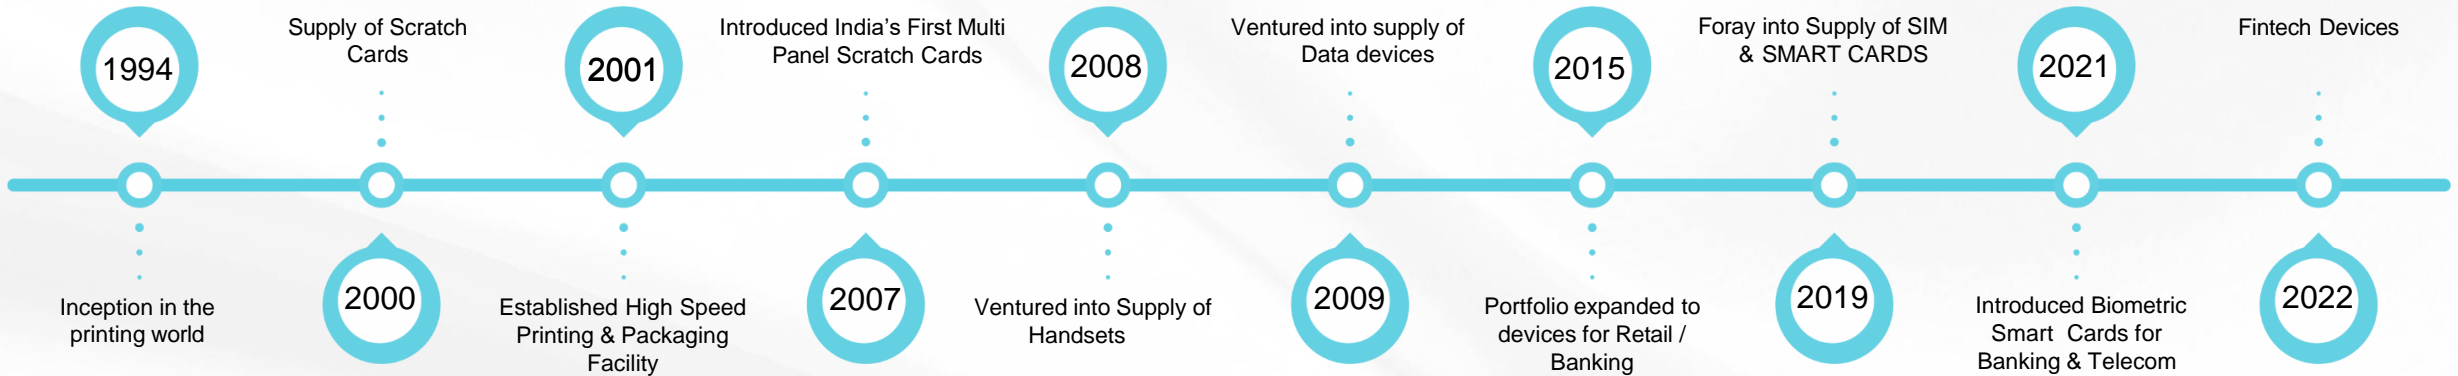

Over 3 Decades  
of Expertise

40+ Languages  
Catered

# OUR MILESTONES

# FILE TRACKING SYSTEM

---

# Why Your Company Needs an RFID File Tracking System

---

## 1. Reduce Labor Costs — (Save Money)

A well-documented file management system will save employees' hours of valuable time, which adds to the company's bottom line.

## 2. Increase Organization — (Reduce Stress)

By implementing an RFID system to manage files, companies can effectively track documents and reduce stress caused by searching aimlessly for an important file.

## 3. Professionalism — (Keeping Up Appearances)

Losing customers due to a misfiling or employee mistake is a reality, especially now in the age where online reviews influence the success of a business. A file management system can not only save time and money but also a business's reputation.

# SYSTEM COMPONENTS

## DESKTOP SYSTEM

This is required for file creation, to search a file and also to generate reports later on for further processing.

## HANDHELD READER

This includes searching a file based on running no. name and as well as location ID and taking an entire count of the number of files in comparison to the physical count

## DESKTOP READER

Helps in checking and reading the existing data over a tag, while connected to a desktop.

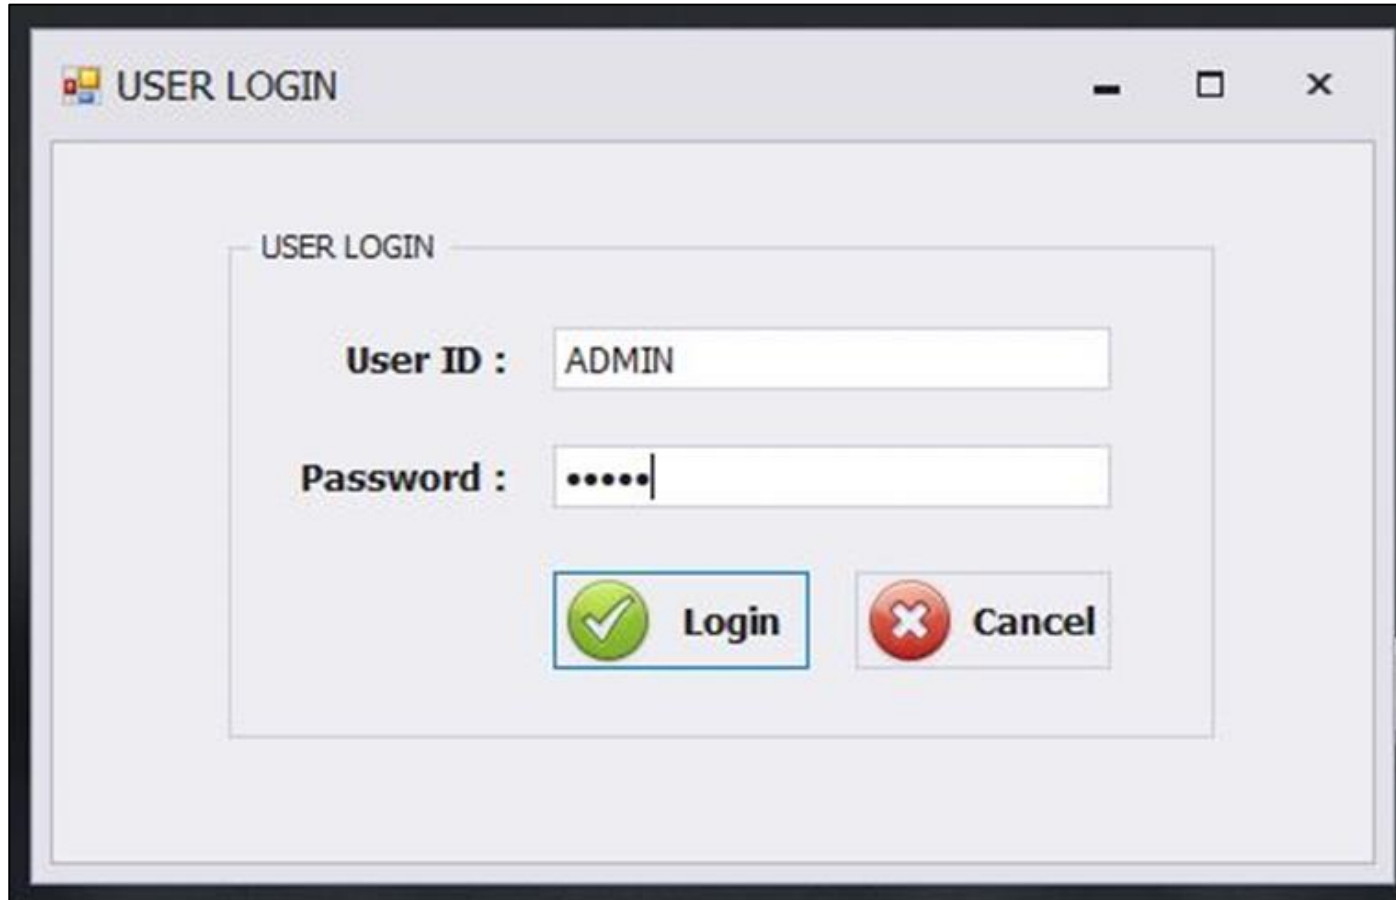

## LONG RANGE READERS

They scan the movement of files with tags going in and out of designated gates.

# Desktop System: User Login

---

The image shows a desktop application window titled "USER LOGIN". The window contains a form with the following elements:

- User ID :** A text input field containing the text "ADMIN".
- Password :** A text input field containing five dots, indicating a masked password.
- Login Button:** A button with a green checkmark icon and the text "Login".
- Cancel Button:** A button with a red 'X' icon and the text "Cancel".
